1. Europe-Korea Conference on Science Technology 2022

Date	19-22 July 2022
Where	Palais du Pharo, Marseille, France
Programme & Timetable	 The Marine and Ocean Division in EKC 2022 was motivated and proposed to introduce and exchange ideas and information in seeking the current issues and the challenges relative to the marine and ocean sectors. To achieve this goal, we wish to invite novel research which can offer meaningful insights into successful technologies for developing shipping greener and safer as well as to invite hot discussion on current policy and regulatory trends locally and internationally. The scope of this Division can be more extensive than what is stated in the title, ranging from addressing the global challenges toward zero-emission and autonomy to demonstrating the effectiveness of different state-of-the-art technologies. It is highly believed that your participation and contribution to the five academic sessions proposed with six prominent UK/Korean partners from research institutes, governmental agents, academic society in this Division will provide a rare opportunity to reach our goal of sustainability in the marine and ocean sectors through the improved strategies, plans and technologies. The following five oral academic sessions are organised at EKC 2022. 1) Maritime safety and decarbonization with emerging technologies with energy transition I (SNAK-EKMOA Joint Session) 2) New challenges of maritime safety for a safer shipping industry (EKMOA-MSRC Joint Session) 3) Maritime policies (EKMOA-KMI Joint Session)
